

# MJ EXCAVATING

## HEAVY CIVIL CONSTRUCTION

MJ Excavating (MJX) performs site preparation, excavation, earthwork, and road building for right-of-way and project access using state-of-the-art technologies such as GPS-guided equipment and AutoBlanket machines.

MJ Excavating optimizes efficiencies in operations, project management, and estimating. When coordinating both civil and electrical construction requirements, MJX has more control over the project schedule ultimately reducing project costs.

A significant advantage of MJX is our position as part M. J. Electric, LLC. This relationship provides MJX with an industry-wide perspective and innovative technologies. With access to M. J. Electric's extensive resources, MJX offers customers a full range of capabilities that can be scaled to match any project requirement.

MJX fosters a culture of safety and maintains a resolute commitment to minimize environmental impact. We look at each task, identify the potential hazards, and mitigate those hazards every day.
